

Innovation Project-Day 1

Tue, 2011-11-29 18:33 -- Reni Barlow

[1]

Hi, I'm Martin Adebayo, a Grade 11 student at a High School in Southern Ontario. For the last few days I've been working on my innovation project for my chemistry class at school. My idea is a stationary fuel cell to power people's homes and buildings.

I find it is more efficient to use them as stationary power rather than putting them in cars because the fuel cell as a whole gets heavy along with the hydrogen tanks reducing the overall efficiency of the car.

I will post updates as the project progresses.
